EDUCATIONAL ATTAINMENT OF JOBSEEKERS REGISTERED FOR EMPLOYMENT WITH THE OHIO STATE EMPLOYMENT SERVICE, APRIL 25, 1965.

BY- DRAKE, JAMES W.   AND OTHERS
OHIO STATE BUREAU OF UNEMPLOYMENT COMPENSATION

PUB DATE   SEP 65
EDRS PRICE MF-$0.27 HC-$5.16   129P.

DESCRIPTORS- ACADEMIC ACHIEVEMENT, *UNEMPLOYED, *HIGH SCHOOL GRADUATES, *DROPOUTS, COLLEGE GRADUATES, CLERICAL WORKERS, SALES WORKERS, SERVICE WORKERS, SKILLED WORKERS, SEMISKILLED WORKERS, UNSKILLED WORKERS, PROFESSIONAL PERSONNEL, SEX (CHARACTERISTICS), AGE GROUPS, EMPLOYMENT SERVICES, *JOB APPLICATION, GEOGRAPHIC DISTRIBUTION, COLUMBUS

A SURVEY OF PERSONS SEEKING EMPLOYMENT THROUGH EVERY PUBLIC EMPLOYMENT OFFICE IN OHIO WAS DESIGNED TO UPDATE AND COMPARE FINDINGS WITH RESULTS OF A SIMILAR STUDY CONDUCTED IN 1962. TOTAL JOBSEEKERS REGISTERED FOR EMPLOYMENT IN 1965 NUMBERED 132,350. IN 1962, THE TOTAL WAS 215,477. THE DECLINE OF 39 PERCENT WAS DUE IN PART TO THE SHORTER VALIDITY PERIOD (TIME WITHIN WHICH APPLICANTS MUST REVISIT THE LOCAL OFFICE TO INDICATE CONTINUED AVAILABILITY) FOR THE 1965 COUNT IN 22 LOCAL OFFICES. MORE IMPORTANT, HOWEVER, WERE GENERALLY IMPROVED EMPLOYMENT OPPORTUNITIES. NEARLY 62 PERCENT OF THE JOBSEEKERS WERE NOT HIGH SCHOOL GRADUATES IN 1962, COMPARED WITH 60 PERCENT IN 1965. AMONG THE YOUTH UNDER 20, THE PROPORTION WHO HAD NOT FINISHED HIGH SCHOOL ROSE FROM 49 TO 54 PERCENT BETWEEN THE TWO COUNTS. JOBSEEKERS UNDER 20 TOTALED 14,394 IN 1962 AND 16,971 IN 1965, REPRESENTING AN 18 PERCENT INCREASE. THIS WAS THE ONLY AGE GROUP WHOSE TOTAL DID NOT SHOW A SUBSTANTIAL DECLINE BETWEEN THE TWO COUNTS. OF THE TOTAL REGISTERED, ONE OUT OF FOUR HAD NO FORMAL EDUCATION BEYOND THE EIGHTH GRADE, THREE OUT OF FIVE HAD NO HIGH SCHOOL DIPLOMA, ONE-THIRD HAD FINISHED HIGH SCHOOL BUT DID NOT GO ON TO COLLEGE, AND FEWER THAN ONE OUT OF 12 HAD SOME COLLEGE TRAINING. THE APPENDIX INCLUDES TABLES OF DATA FOR EACH COUNTY IN OHIO WITH THE EDUCATIONAL ATTAINMENT OF REGISTERED JOBSEEKERS BY OCCUPATIONAL AND AGE GROUP IN 1962 AND 1965. (PS)

ACKNOWLEDGEMENTS

Employability of jobseekers, of course, varies with many factors beyond the state of the economy. Among the more important of these factors are level of educational attainment, skill, age, and sex. This study, emphasizing formal educational attainment, was designed not only to update comparable tabulations three years earlier, but also to provide--for the first time--data for each county of Ohio.

The research design and analysis were undertaken by William Papier, Director of Research and Statistics, who supervised the study. James W. Drake, Assistant Director for Statistics, edited the local returns and prepared the summary tabulations, assisted by Gerry Ziegler, Statistician.

Especial acknowledgement is due Millard E. Draudt, Director of Local Office Operations, and his local employment office managers throughout Ohio, who were responsible for the substantial task of reviewing and tallying the basic registration records.

Willard P. Dudley, Administrator
Ohio Bureau of Unemployment Compensation

September 1965

EDUCATIONAL ATTAINMENT OF JOBSEEKERS REGISTERED FOR EMPLOYMENT WITH THE OHIO STATE EMPLOYMENT SERVICE, APRIL 25, 1965

INTRODUCTION

The Ohio Bureau of Unemployment Compensation administers the statewide network of public employment offices known as the Ohio State Employment Service. Although these offices serve all of Ohio's 88 counties, there were a total of 80 full-time offices in the State, located in 55 counties, as of April 25, 1965.[1]

Persons seeking employment in Ohio, whether or not covered under the Ohio Unemployment Compensation Law may register with the Service and be considered for job openings. No charges, beyond regular tax costs, are levied on applicants or employers.

Persons already employed, but who are seeking other or better jobs, may also register. Although no count is made of those employed at the time of registration, it is estimated that at least 95 percent are jobless.

Candidates for employment in Ohio are free to register with any public employment office in the State. Most, more than likely, register with the office nearest their home, which is frequently in the county of residence. Some, who prefer employment in large metropolitan centers or elsewhere, doubtless cross one or more county lines to register. Data by county, therefore--presented for the first time in this study--relate to county of employment preference, except for counties

---

[1]See Appendix for map showing location of full-time offices and counties served.

which have no full-time offices. For counties where no full-time offices are located, data on jobseekers were tallied according to home county. The great preponderance of jobseekers probably prefer jobs within commuting distance of home.

This study was designed to update and compare findings with results of a similar study conducted three years earlier, the supply of which was exhausted shortly after publication. As in the case of the prior survey, a complete count was made of persons registered with every public employment office in Ohio, as of April 25. This date was chosen in both cases to exclude, insofar as possible, large numbers of temporarily unemployed construction workers (during winter months) and students seeking vacation jobs (during summer months).

The number of active jobseekers is affected, both in volume and composition, not only by seasonal factors and the general level of the economy, but also by the length of time registrations are considered active, the extent to which jobseekers voluntarily solicit the aid of public employment offices, and other factors.

Registrations are maintained as active for a prescribed validity period--the time within which applicants must revisit the local office to indicate continued availability for employment. At the time of the earlier study 22 local offices had validity periods of 60 to 89 days. The remaining 42 offices kept their applications active from 30 to 59 days. At the time of the current study, however, all local offices were clearing their files on 30 to 59 day validity periods.

Registered jobseekers represent a very large segment but by no means all of the unemployed. Most claimants for unemployment compensation are included. Among those usually excluded, however, are

claimants laid off temporarily with expectations of early recall, and partially-employed claimants on reduced hours. Those who have been disqualified for benefits, or who have exhausted their benefit rights, may register voluntarily, but are not required to do so.

Persons who are not covered under the Ohio Unemployment Compensation Law may or may not be registered. Of these, some may seek other channels of employment--through direct application to employers, union hiring halls, advertisements, family and friends, professional associations, schools, colleges, non-profit, or private employment agencies. Some of the unemployed--because of age, health, or other reasons--may not maintain active registrations on a continuing basis, possibly because of limited needs or job prospects, or both.

Other factors also influence the volume and composition of registered jobseekers. These include the effectiveness of local offices as placement agencies, the extent to which local employers maintain self-sufficient personnel departments, and the nature, extent, and effectiveness of competing agencies and media.

Levels of formal educational attainment, as reported by jobseekers, were cross-classified in both studies by sex, occupational group, and age group. Application records were tallied to record the formal schooling of each jobseeker in one of five possible groups: (1) eight or fewer grades; (2) some high school; (3) high school graduate; (4) some college; or (5) college graduate.

Following the standard classification system used by all public offices in the nation, each jobseeker was further tallied by skill, in one of seven broad occupational groups: (1) professional, technical, and managerial; (2) clerical and sales; (3) service; (4) skilled;

(5) semiskilled; (6) unskilled (including agricultural); and (7) entry. Entry classifications apply to persons who must be considered for jobs on bases other than prior work experience or fully-qualifying training. Many new entrants to the labor force are so-classified. Older workers may also be tallied in entry occupations, when re-employment prospects in prior occupations are poor because of skill obsolescence or deterioration, or physical handicaps.

Younger jobseekers were broken into two age subgroups--those under 20 and those from 20 through 24 years of age. Those 25 and over, however, were tallied in ten-year intervals, up to the oldest group who were 65 years of age or over.

Detailed tabulations for the State of Ohio and for individual counties are presented in the Appendix. Preceding these, however, are two maps, the first of which shows the location of local offices as of April 25, 1965 and the counties served by each. The second map identifies the eight most populous counties of Ohio, indicating areas served by local offices in these counties, and also identifying counties embraced in tabulations of registrants in Southeastern Ohio.

Tables in the A series in the Appendix are all summary tables, offering statewide data or comparative data for groups of counties. Tables in the B series are individual county tables, presented in alphabetic sequence.

In interpreting the data tabulated it should be kept in mind that the active file of the Ohio State Employment Service should not be considered necessarily representative either of the labor force or of the unemployed segment of the labor force. They do reflect, however, some of the major qualifications for employment of a very large segment of the unemployed jobseekers in Ohio.

STATEWIDE ANALYSIS

Total jobseekers registered for employment with the Ohio State Employment Service on April 25, 1965 numbered 132,350. Of these, two out of three were men. Three years earlier the total was 215,477. Nearly seven out of ten were men.

The decline of 39 percent in the total number of jobseekers, as well as the shrinkage in the proportion of men, was due in part to the shorter validity period for the latest count for 22 local offices. Probably far more important, however, were generally improved employment opportunities. As of April 1962, for example, Ohio's overall rate of unemployment was estimated at 5.2 percent of the civilian labor force. By April 1965 this had dropped to 2.7 percent.

Over the three-year period moderate improvement occurred in the level of formal educational attainment of Ohio's registered jobseekers. Whereas nearly 62 percent were not high school graduates at the time of the earlier count, only 60 percent were so-classified by April 25, 1965. The improvement, however, was concentrated largely among women jobseekers, since, as indicated by the percentages below, 65 percent of the men in both counts had not finished high school:

Educational Attainment	Total		Men	
	1962	1965	1962	1965
Total[1]	100.0	100.0	100.0	100.0
Eight grades or fewer	29.6	25.8	33.8	30.6
Some high school	32.2	34.3	31.7	34.7
High school graduate	30.8	31.9	26.6	26.3
Some college	6.1	6.7	6.3	6.8
College graduate	1.3	1.4	1.6	1.7

[1]Totals may not add precisely to 100.0 percent in this and following tables because of rounding to one decimal place.

The proportion of men with high school diplomas (but no college training) shrank slightly. This probably reflects somewhat greater employer demands for male high school graduates, as job prospects generally improved between April 1962 and April 1965.

As might be expected, jobseekers with lower levels of skills also had lower levels of formal education. The table below shows the percentages of jobseekers by occupational group who did not graduate from high school:

Occupational Group	Total 1962	Total 1965	Men 1962	Men 1965
Total	61.8	60.1	65.5	65.3
Professional and managerial ..	19.1	16.0	17.6	14.8
Clerical and sales	28.8	24.2	29.9	26.5
Service	74.7	74.0	76.6	76.1
Skilled	67.8	66.8	67.7	67.1
Semiskilled	72.5	71.7	72.8	73.0
Unskilled and agricultural ...	75.8	75.0	76.9	77.4
Entry	43.7	50.2	45.0	54.2

Lowest levels of educational attainment were reported for jobseekers with unskilled, semiskilled, and service occupations. In these groups better than seven out of ten jobseekers had not finished high school. The percentages were slightly higher for men.

Relatively few candidates with professional, technical, managerial, clerical and sales skills, on the other hand, dropped out of school before receiving their high school diplomas. At the latest count only one out of six in the professional and managerial group, and one out of four in the clerical and sales group were dropouts. The proportions had declined for both groups.

It might also be expected that the younger jobseekers had somewhat higher levels of formal education than those who were older.

Again singling out those who did not graduate from high school by age group, the proportions follow:

Age Group	Total 1962	Total 1965	Men 1962	Men 1965
Total	61.8	60.1	65.5	65.3
Under 20	49.3	54.3	56.4	61.6
20 - 24	42.5	42.5	47.4	48.7
25 - 34	58.1	57.4	60.8	61.4
35 - 44	65.6	65.5	69.3	71.2
45 - 54	71.9	69.4	74.7	73.9
55 - 64	82.9	79.9	85.3	82.6
65 and over	83.1	82.7	84.8	85.3

Among the youth under 20 the proportion who had not finished high school rose from 49 to 54 percent between the two counts. Above this age group, however, the percentage of dropouts rose with age. Whereas only 43 percent of those 20 through 24 did not graduate from high school, 83 percent of those 65 years of age or older did not continue in school long enough to receive high school diplomas. The percentages were consistently higher for men in each age group than for total jobseekers.

Registrants with the lowest levels of education--unskilled, semiskilled and service workers--accounted for more than one-half the total number of jobseekers--55 percent in 1962 and 52 percent in 1965. The proportions were even higher for men jobseekers, as shown below:

Occupational Group	Total 1962	Total 1965	Men 1962	Men 1965
Total	100.0	100.0	100.0	100.0
Professional and managerial ..	3.0	3.1	3.5	3.6
Clerical and sales	13.9	13.4	6.3	6.0
Service	11.2	10.7	6.3	6.4
Skilled	17.1	14.0	24.0	20.4
Semiskilled	21.6	20.1	25.0	23.4
Unskilled and agricultural ...	22.0	21.0	25.2	24.7
Entry	11.3	17.7	9.9	15.5

Jobseekers in entry classifications rose from 11 percent in 1962 to nearly 18 percent in 1965. At the time of the earlier count only 44 percent so-classified had not finished high school. By April 1965 this figure had risen to 50 percent. The rise was due to a substantial increase, between the two counts, among those in entry occupations with "some high school." This group added one-fifth to its total--increasing from 7,927 to 9,486--in the face of declines for every other occupational group. Jobseekers under 20 years of age accounted for much of the increase. This age group, with "some high school," jumped 34 percent between 1962 and 1965, from 6,075 to 8,139.

The great influx of young people into the Ohio labor market in recent years and the relative lack of job openings for which they were qualified by education, or otherwise, is reflected in the growth in the number of jobseekers under 20. Their 1962 count totaled 14,394. Three years later this figure had risen 18 percent, to 16,971. This was the only age group whose total did <u>not</u> show a substantial decline between the two counts. Whereas fewer than 7 percent of all the registered jobseekers were under 20 at the time of the 1962 count, this figure reached nearly 13 percent three years later.

AREA ANALYSIS

Ohio has eight counties, each with a city of 100,000 or more in population. They are all metropolitan counties which, in the aggregate, account for most of the jobseekers in the State. These counties are Cuyahoga, Franklin, Hamilton, Lucas, Mahoning, Montgomery, Stark, and Summit.

It was not possible, in the earlier survey, to tabulate jobseekers registered, by county. Where a given office served an adjacent county or counties, the figures were combined for the area served. Although the latest survey does provide data by county, in order to compare the two surveys the same counties were summarized so that the combined data for the eight large counties embrace eight additional smaller counties served in 1962 by these large counties (see second Appendix map).

Twenty-one counties in Southeastern Ohio posed a similar problem in providing geographic comparability for the two counts. These counties, within the so-called Appalachian Area, account for a relatively small share of the State's jobseekers. The dominance of the eight large-county areas is reflected in the percentages below:

Area	Total 1962	Total 1965	Men 1962	Men 1965
Total	100.0	100.0	100.0	100.0
Eight large county areas (16) ..	59.5	57.1	59.7	58.4
Southeastern counties (21)	9.5	11.0	10.0	11.8
All other counties (51)	31.0	31.9	30.3	29.8

Inclusion of data for eight smaller counties in the total for those served by the eight largest had relatively little effect on the

aggregate. In the 1965 count the 16 counties embraced in the area served by offices in the eight largest accounted for 57 percent of all the registered jobseekers in Ohio. Offices in the eight largest counties alone, however, accounted for 54 percent.

Data for areas served by offices in the larger counties greatly affect and largely control the statewide figures. Southeastern Ohio for at least a quarter-century has been an area of relatively limited employment opportunity, doubtless affecting the volume, age composition, skills, and educational attainment of jobseekers in the area. Comparisons might therefore be most meaningful between the 16 counties in the industrialized areas--the large county areas accounting for nearly three-fifths of the State's jobseekers--and the 51 counties outside Southeastern Ohio, with nearly one-third. Nine out of every ten jobseekers in Ohio were among these 67 counties, at the latest count.

In the percentage comparisons which follow, the "large areas" are defined as the 16 counties served by offices in the eight largest, while the "small areas" represent the 51 counties outside the 21 in "Southeastern Ohio."

Educational Attainment	Large Areas		Small Areas	
	1962	1965	1962	1965
Total	100.0	100.0	100.0	100.0
Eight grades or fewer	30.1	26.5	27.6	23.0
Some high school	32.8	34.1	32.3	35.4
High school graduate	28.6	30.1	33.8	34.7
Some college	6.8	7.5	5.5	6.0
College graduate	1.7	1.8	.9	.9

Jobseekers both in the large and small areas showed improvement, between the two counts, in their levels of formal educational attainment.

In the large areas, however, the proportion who did not finish high school was moderately higher than in the small areas. On the other hand, the percentage with college training was also somewhat greater in the large areas. The latter pattern probably reflects not only easier accessibility to colleges and universities in the larger cities, but also greater demands in such areas for college-trained personnel.

The extent to which jobseekers in these two groups of counties did not finish high school is indicated, by occupational group, as follows:

Occupational Group	Large Areas 1962	Large Areas 1965	Small Areas 1962	Small Areas 1965
Total	62.9	60.6	59.9	58.4
Professional and managerial ..	16.9	14.8	21.9	17.9
Clerical and sales	30.7	25.2	26.4	23.1
Service	74.9	75.0	74.4	72.9
Skilled	68.5	68.8	66.7	62.9
Semiskilled	74.1	74.8	69.6	67.4
Unskilled and agricultural ...	78.2	77.4	72.1	71.2
Entry	46.6	46.9	42.2	53.0

In the large areas three out of four service and semiskilled jobseekers did not finish high school. The proportion was slightly higher for unskilled workers. Although the percentages were similarly high in the small areas, they were smaller than in the large areas, with a better pattern of improvement between 1962 and 1965. The percentage of professional, technical, and managerial candidates without high school diplomas, however, was greater in the small than in the large areas. In all likelihood, opportunities for employment of candidates with such skills were greater in the large areas.

Variations in age distributions among candidates for jobs in the two areas who did not finish high school are presented, in percentages, below:

Age Group	Large Areas 1962	Large Areas 1965	Small Areas 1962	Small Areas 1965
Total	62.9	60.6	59.9	58.4
Under 20	55.6	54.3	46.7	54.4
20 - 24	43.4	42.0	41.9	43.2
25 - 34	58.4	57.8	58.3	56.2
35 - 44	65.7	65.4	64.8	64.4
45 - 54	72.7	69.5	68.8	67.4
55 - 64	82.8	79.7	81.7	78.1
65 and over	83.1	82.6	82.1	81.9

Among youth under 20 the percentage who did not complete high school increased in the small areas between 1962 and 1965. For the group from 20 through 24, similar increases occurred in the small areas. For those 25 and over, moderate improvement was apparent, although the proportions were higher than for the younger group, and rose with more advanced age.

The relative distributions of registered jobseekers by skill, as between the two groups of counties for the two counts, follow:

Occupational Group	Large Areas 1962	Large Areas 1965	Small Areas 1962	Small Areas 1965
Total	100.0	100.0	100.0	100.0
Professional and managerial ..	3.3	3.7	2.7	2.5
Clerical and sales	14.8	14.7	12.8	12.3
Service	11.7	11.2	10.2	10.6
Skilled	16.2	14.2	18.2	12.9
Semiskilled	20.9	19.3	22.4	21.2
Unskilled and agricultural ...	22.3	21.3	21.2	19.5
Entry	10.7	15.7	12.5	21.1

Especially notable in the data above are the marked gains in both areas, in the percentages classified in entry occupations. Also

noteworthy is the much greater relative shrinkage of skilled workers in the small areas between the two counts, as compared with the large areas.

This may be due to out-migration of skilled workers from the small areas or to greater relative demand for such workers locally. Since skilled workers tend to be heavily concentrated in manufacturing industries in the large industrial centers, and since such industries have been booming since 1962, the explanation probably lies in greater out-migration from small areas than from the large areas. The smaller share of white-collar jobseekers--professional, technical, clerical, and sales--in the small areas may be similarly explained, except that opportunities for such workers were probably greater in nonmanufacturing industries in the urban centers.

The Southeastern Ohio counties are all relatively small in terms of population and labor force. In the aggregate, the 21 counties so-defined for purposes of this study[1], accounted for 11 percent of the State's jobseekers at the latest count. The 51 counties outside those embraced in the area served by the eight largest were also relatively small, accounting for less than one-third of Ohio's registered job-seekers in 1965. Over the years, however, job prospects have generally been better in the smaller counties outside Southeastern Ohio than in Southeastern Ohio. Comparison of the registered jobseekers, therefore, in the 51 counties defined as small areas with those in the 21 counties of Southeastern Ohio may be of interest. Formal educational attainments, in percentages of jobseekers at each level, follow for the two groups of counties:

[1]See second Appendix map. See also Papier, William, "Ohio Seeks Economic Balance," Employment Security Review, December 1953, U.S. Government Printing Office, Washington, D.C.

Educational Attainment	Small Areas 1962	Small Areas 1965	Southeast Areas 1962	Southeast Areas 1965
Total	100.0	100.0	100.0	100.0
Eight grades or fewer	27.6	23.0	32.6	29.9
Some high school	32.3	35.4	27.8	31.8
High school graduate	33.8	34.7	34.8	33.1
Some college	5.5	6.0	4.3	4.6
College graduate	.9	.9	.6	.6

Whereas the proportion who did not finish high school dropped slightly between the two counts in the small areas, a moderate increase occurred in Southeastern Ohio. The reverse pattern appeared with respect to high school graduates. Both groups, however, increased their shares of jobseekers who had some college training but did not graduate from college.

The proportions of registered jobseekers at the various skill levels in the two groups of smaller counties who did not finish school follow:

Occupational Group	Small Areas 1962	Small Areas 1965	Southeast Areas 1962	Southeast Areas 1965
Total	59.9	58.4	60.4	61.7
Professional and managerial	21.9	17.9	28.7	19.5
Clerical and sales	26.4	23.1	23.2	20.5
Service	74.4	72.9	74.9	71.5
Skilled	66.7	62.9	67.5	66.7
Semiskilled	69.6	67.4	72.1	69.7
Unskilled and agricultural	72.1	71.2	72.0	73.2
Entry	42.2	53.0	30.8	54.9

The percentages who did not finish high school were somewhat higher in Southeastern Ohio than in the small areas elsewhere, at the time of both counts. This was not the case, however, for clerical and sales workers, or, in 1962 for entry workers, and in 1965 for service workers. Both groups of counties experienced notable gains in the proportions

assigned entry classifications who had not finished high school, with an especially sharp rise for such applicants in Southeastern Ohio.

The age distributions of jobseekers in the two areas are compared below, again showing percentages who did not finish high school:

Age Group	Small Areas 1962	Small Areas 1965	Southeast Areas 1962	Southeast Areas 1965
Total	59.9	58.4	60.4	61.7
Under 20	46.7	54.4	31.4	53.8
20 - 24	41.9	43.2	39.3	43.0
25 - 34	58.3	56.2	55.7	57.9
35 - 44	64.8	64.4	67.5	69.0
45 - 54	68.8	67.4	76.3	73.7
55 - 64	81.7	78.1	87.5	85.2
65 and over	82.1	81.9	87.9	86.0

For those 35 years of age and over, the percentages who did not finish high school were greater in Southeastern Ohio than in other small areas, at both surveys. In 1965, this was true for all jobseekers 25 years of age or older. The percentages who failed to complete high school generally increased with age. Over 85 percent of those over 54 years of age in Southeastern Ohio had not finished high school.

Percentages of registered jobseekers by skill are compared below for the two groups of small counties:

Occupational Group	Small Areas 1962	Small Areas 1965	Southeast Areas 1962	Southeast Areas 1965
Total	100.0	100.0	100.0	100.0
Professional and managerial ..	2.7	2.5	2.1	1.9
Clerical and sales	12.8	12.3	11.7	9.9
Service	10.2	10.6	10.5	8.4
Skilled	18.2	12.9	19.5	16.6
Semiskilled	22.4	21.2	23.0	21.2
Unskilled and agricultural ...	21.2	19.5	22.3	24.2
Entry	12.5	21.1	10.8	17.8

The proportions of entry and white-collar jobseekers were lower at both counts in Southeastern Ohio than in the other small areas. The percentages of skilled as well as unskilled workers, however, were higher.

SUMMARY AND COMMENTARY

It would be possible, from the data appended, to comment individually on the patterns of educational attainment of jobseekers registered with the Ohio State Employment Service in each of Ohio's 88 counties. This was not done, in part because of a high degree of similarity in broad patterns, such as the extent to which candidates finished high school. A further consideration was the desire to publish and make these data available while they were still timely.

Perhaps the most striking fact observed is the remarkably high dropout rate among the registered jobseekers--defining that rate as the percentage who failed to graduate from high school. At the latest count, better than one out of four had no formal education beyond the eighth grade. One out of three had some high school training, but not enough to graduate. Thus three out of five jobseekers had no high school diplomas. Those who finished high school but did not go on to college represented one-third of the total registered. The rest--fewer than one out of twelve--had some college training or degrees.

Those groups which were numerically among the largest, probably embracing candidates in greatest need of employment, had relatively low levels of formal education. The men, for example, outnumbered the women nearly two-to-one. Yet the women, on the whole, had a higher level of educational attainment.

More than one-half the total registered jobseekers were unskilled, semiskilled, or service workers. These were the candidates heavily concentrated at the lower levels of the educational scale.

One out of four applicants was 45 years of age or older. The highest proportion of dropouts was among these older jobseekers.

As might be expected, jobseekers were heavily concentrated in the more industrialized urban centers of Ohio. Nearly three out of five were served by offices in the eight most populous counties. Candidates in these large urban centers, as a rule, had higher dropout rates than jobseekers in the more rural areas.

In Southeastern Ohio the percentage who failed to finish high school was higher than that in similar small areas elsewhere in the State. Furthermore, this dropout rate increased in Southeastern Ohio between 1962 and 1965, in contrast with the general pattern elsewhere.

The statewide record indicates moderate improvement in the level of formal educational attainment of registered jobseekers between 1962 and 1965. Nevertheless, this is hardly impressive, especially in the light of widespread demands for higher and higher levels of training and skill.

It would be both unrealistic and unsound to lower job specifications, insofar as education and skill are concerned, in order to enhance employment prospects for those who solicit the aid of public employment offices. This could only lower living standards through curtailed productivity, higher costs, and deterioration in the quality of goods and services. The alternative, clearly, must be that of improving the qualifications of jobseekers, through a broad range of public and private efforts--through formal education to the highest level of student interest and ability--through vocational, on-the-job, and apprentice training--and through widespread programs of adult education.
